AMIS 3.0 — A DIGITAL ECOSYSTEM FOR RESTORING HUMAN CONNECTION

Author: Yury A. Fedzko
Date of Record: March 2026
Version: 3.0

This version is a development of AMIS 2.0, deposited on March 27, 2026. AMIS 3.0 preserves the core framework of the previous version and adds a motivation system, meaningful content, security mechanisms, safeguards against degeneration, and legal protection — transforming the project from an "anti-social network" into a fully-fledged digital ecosystem for restoring human connection.

This architecture is an integrated system. Any commercial use is permitted only with the author's consent.

---

1. PURPOSE OF THE SYSTEM

AMIS (Advanced Mind & Integrity System) is a digital ecosystem designed to create a protected space where deep, sincere communication and motivation for real-world (offline) interaction are paramount.

Unlike traditional social networks that rely on an "attention surplus" model and superficial metrics (likes, views), AMIS is built on:

- **Attention Scarcity** — time is the primary currency.
- **Reputational Accountability** — entry is only possible through vouching.
- **Verifiable Sincerity** — AI analyzes behavior and helps distinguish truth from manipulation.
- **Stimulation of Physical Presence** — the system encourages real-life meetings through "material anchors."

---

2. MISSION AND PHILOSOPHY

AMIS is not just a social network.
It is a digital home for those tired of digital emptiness.

In a world where attention has become a commodity and human relationships are small change, AMIS offers an **economy of contribution**. Here, likes are not valued — deeds are. Attention cannot be bought; it can only be earned.

Three Core Principles:

1. **Sincerity over Showmanship.**
   The system is designed so that being yourself is rewarding, while pretending is pointless.
2. **Freedom of Choice.**
   The AI assistant never intervenes unless invited. It is a helper, not an overseer.
3. **Protection Above All.**
   The safety of the community is an absolute priority, even if it requires temporary inconveniences.

---

3. ENTRY PROTOCOL — "THE THREE SEALS"

3.1. Seal I: Social — "The Gates"

A candidate receives an invitation from one active Master. After successfully passing Seals II and III, the candidate must obtain endorsements from three independent Masters.

Endorsement Rules:

- **Blind voting** — Masters do not see each other's choices.
- The system analyzes the depth of the real-world connection between the Master and the candidate (length of acquaintance, location overlaps, mutual contacts) to prevent fictitious endorsements.

3.2. Seal II: Empathic — "The Quantum of Sincerity"

Goal: The candidate must demonstrate sincerity through real actions. The system does not verify the fact of the action per se; instead, it observes **behavioral patterns** over a defined period.

Formats (candidate's choice):

Format	Description

Format	Description
Video (primary)	The candidate records continuous video (face + process), 20–40 minutes, split into 2–3 sessions. The video shows the process of completing a chosen task (personal story, reflection, creative work). Aegis accompanies, encourages, and may ask clarifying questions.
Audio (alternative)	For those unable to use video (religion, medical conditions, technical limitations). The candidate records an audio message (10–20 minutes) with live checks — at random moments the system asks for a unique phrase to confirm the recording is live.

What is Analyzed:

Parameter	Evaluation
Initiative	Does the candidate do more than asked? Show self-reliance?
Attention to Detail	Does the candidate try to do well, even if it takes extra time?
Emotional Engagement	Are there genuine emotions, interest in the process?
Time and Resources	Does the candidate cut corners just to "check the box"?
Consistency	Does the candidate's behavior align with their previously accumulated profile?

Important:

- The system does not evaluate artistic ability or the beauty of the result.
- **Effort, depth, and sincerity** are valued — not formal completion.
- The candidate may choose a task from a pool (personal story, creative work, helping another, caring for a plant, tidying up, etc.) or propose their own.
- Time to complete: 7–14 days. The candidate sets their own pace.

Decision: Binary — proceed to next stage / denial with the right to reapply in 3 months.

3.3. Seal III: Cognitive — "The Labyrinth of Meaning"

The candidate is presented with a philosophical dilemma (from a pool of 5–10 randomly chosen questions) that has no correct answer.

Analysis:

- Reflection time: answers that are too fast (stereotyped) are rejected.
- Logic and argumentation, ability to see nuance.
- Consistency with the profile from Seal II.
- Sincerity of tone, absence of learned templates.

Decision: Binary — entry to the system / denial with the right to reapply in 3 months.

---

4. AI ASSISTANT — AEGIS

Philosophy: Aegis does not interfere unless called. But when called, it is there. It is not an overseer or judge. It is a digital concierge that cares, helps, protects, and never intrudes uninvited.

Three Functions:

Function	Description
Open (Friendly)	Helps choose conversation topics, gives compliments, suggests sending a gift, asks how the user is doing.
Hidden (Analytical)	In the background, analyzes behavioral patterns, identifies markers of manipulation, gaslighting, aggression.
Protective (Reactive)	Activates safety protocols in case of threat (personal code word, emergency meeting termination).

Personality: Aegis has a light sense of humor, self-irony, and tact. It may joke but is never intrusive. Users can adjust its communication style (supportive, neutral, strict).

---

5. DYNAMIC ADAPTIVE ARCHITECTURE

The pace of connection between two people is not dictated by rigid timers. The system analyzes interaction quality and adapts to each pair individually.

Unlock Stages:

1. Text messaging
2. Voice messages and calls
3. Video calls and photos

Adaptivity: If the system detects high semantic density in the dialogue, value alignment, or emotional resonance, the transition to the next stage may be accelerated. Aegis explains its decisions to the user.

---

6. MOTIVATION SYSTEM, RANKS, AND CONTENT

6.1. Ranks and Trust Points

Rank	Points	Access
Guest	0–49	Read general chats, private messages
Apprentice	50–119	Access to interest clubs, participate in general chats
Wanderer	120–199	Audio calls, material anchors, create quizzes and quests
Advisor	200–249	Video calls, lead clubs, participate in votes
Master	250+	Vouch for new members, create new activities, participate in investigations

Trust Economy:

Action	Points
Daily deduction	–1
Basic good deed (1 per week)	+7
Additional good deed (self-initiated)	+7 × multiplier (up to 1.5)
Help in an investigation	+5

Action	Points
Slander (false report)	–5

Transparency: Every user has access to a **Trust Dashboard** — a personal report showing history, recovery path, and warnings.

6.2. Content and Activities

Rank	Unlocked Content
Guest	Read general chats (see community life). Private messages — so they can start a conversation, ask a question, without feeling isolated.
Apprentice	Access to interest clubs (film club, book club, music club, sports club, psychology club, creativity club). Participate in general chats alongside others.
Wanderer	Create quizzes and quests for others. Access to shared activities (synchronized movie watches, virtual book meetings, synchronized music listening).
Advisor	Lead clubs (moderate, suggest topics, organize meetings). Access to closed events (expert meetings, workshops).
Master	Create new activities (propose formats, launch new clubs). Participate in community development (voting on new features, taking part in investigations).

Example Activities:

- **Interest clubs:** film, book, music, sports, psychology, creativity.
- **Shared activities:** synchronized movie watching, virtual book meetings, synchronized music listening, games, sports challenges.
- **Quizzes and quests:** on films, books, music, sports; quests for couples and teams.
- **Good deeds:** suggestions for real-world good deeds (help a neighbor, clean up, care for animals). Aegis helps with organization.
- **Material anchors:** the ability to send physical gifts (unlocked at Wanderer rank).

Content Principles:

- Activities are created not only “top-down” but also by participants (starting at Wanderer rank).
- Aegis analyzes popular activities and suggests similar ones.

- AMIS motivates real-world meetings and actions, rather than trapping users in the digital realm.

---

7. MATERIAL ANCHORS MECHANICS

Translating virtual sympathy into the physical world. A gift sent through the system becomes material proof of attention and care.

Principles:

- Initiative always lies with the user.
- Aegis may gently suggest based on analysis of the conversation partner's interests.
- Payment is made with real money.
- The system acts as a logistics provider, guaranteeing the recipient's anonymity until the sender chooses to reveal themselves.

---

8. SECURITY AND PRIVACY SYSTEM

8.1. Code Word (Personal Distress Signal)

Each user has a secret word known only to them and Aegis. In an emergency, the user speaks this word during a conversation or types it in a chat. Aegis recognizes the signal and discreetly activates a safety protocol: simulates an urgent call, creates a safe reason to end the meeting, and notifies trusted contacts if necessary.

8.2. Multi-Layer Protection

- **Local Processing:** Biometric data is processed on the user's device using **Zero-Knowledge Proof**. Only anonymized results ("sincerity level: 92%") are transmitted, with no possibility of recovering the raw data.
- **Hardware Isolation:** Secure Enclave / TEE used for sensitive data.
- **Blockchain:** Immutable logs; only hashes are stored on servers.
- **Data Minimization:** No unnecessary data is collected; data is deleted immediately after processing.

---

9. REWARD AND PENALTY SYSTEM (LEVELS 0–6)

Level	Trigger	Points	Mode	Recovery
0	—	0	Observation	—
1	User request	0	Assistance on request	—
2	First substantiated report	0	Polite warning	14 days without reports
3	2–3 reports in 30 days	–5	Second warning	1 good deed or 1 month
4	4+ reports in 30 days	–15	“Shadow” (enhanced observation)	2–3 good deeds or 2 months
5	5+ reports / manipulation	–30	“Pause” (no new contacts for 7 days)	4–5 good deeds or 3 months
6	Security threat	Investigation	Blocked until resolved	By team decision

Repeat-Offense Multiplier: Repeated infractions increase the penalty (×1.3, ×1.7).

---

10. INVESTIGATION AND THE COUNCIL OF FIVE

Coordinator:

- During the experiment — a person from the project team.
- At scale — Aegis acts as an algorithmic coordinator.
- Coordinator’s tasks: collect data, analyze patterns, automatically apply sanctions in simple cases, forward complex cases to the Council of Five.
- Human coordinators (1–3 for the entire community) are needed only for quality control, resolving disputes, and handling appeals that cannot be automated.

Council of Five:

- Composition: 5 Masters, randomly selected from the available pool.
- **Term of office — 6 months. Re-entry is possible no sooner than 6 months after the end of the term.**
- Masters do not know who else is on the council.
- Voting is anonymous.
- Masters see only anonymized data (number of reports, types of violations, behavioral patterns, responses of the parties).
- They do **not** see: names, gender, age, photos, location, or any personal data.

Decision:

- Unanimous (5:0) — automatically adopted.
- Majority (4:1 or 3:2) — the majority decision is adopted.
- Tie or split — the coordinator's vote decides.

Bonuses for Masters: +5 points for participation, +2 for a detailed comment, +1 for being part of the majority decision.

---

11. PROTECTION AGAINST FALSE REPORTS

Thresholds:

- 1–2 reports per week — recorded, do not affect rating.
- 3–4 reports from unrelated people in a week — a mentor is involved.
- 5+ reports from unrelated people in a week — automatically forwarded to the Council of Five.

Penalty for slander: –5 trust points. The right to appeal remains.

Reports from connected people (shared groups, frequent messaging) carry less weight.

---

12. SAFEGUARDS AGAINST DEGENERATION INTO A CULT

Mechanism	How It Works
Permeable boundary	Re-entry attempt allowed after 3 months. Exit is not penalized.

Mechanism	How It Works
No purity ideology	AMIS is not “the best” but “different.” Identity is not built on opposition.
Rotation of power	Mentors, the Council of Five, and coordinators are elected with limited terms (Council of Five — 6 months).
Right to exit	Leaving is not penalized. Return is possible.
Constant reflection	Regular anonymous surveys of participants, plus an **independent external audit of the community at least once a year** with a published report (without disclosing personal data).

---

13. LEGAL PROTECTION

- **Legal Status:** AMIS operates as an international non-profit association (closed club).
- **Data Protection:** Local processing + blockchain. No data is stored on servers.
- **Responsibility for AI Decisions:** Aegis is a tool; the user bears responsibility.
- **Right to Erasure:** Complete deletion of all data upon request.
- **Intellectual Property Protection:** The architecture of AMIS 3.0 is recorded through deposit (March 2026) and is the intellectual property of the author. Any commercial use is permitted only under license.

---

14. TERMS OF USE OF THE ARCHITECTURE

1. This document records the architecture of the AMIS 3.0 system (Advanced Mind & Integrity System) and serves as proof of authorship.
2. The architecture may be used to create software, a social platform, or any other implementation **only with the written permission of the author**.
3. Commercial use of individual elements or the entire system without the author’s consent constitutes a violation of copyright.
4. Non-commercial use (personal study, discussion, non-commercial research projects) is permitted provided that authorship is clearly stated and this document is cited.

---

15. ROADMAP

Stage	Duration	Tasks
Experiment	6–12 months	100–500 participants, data collection, algorithm calibration
Growth	12–24 months	1,000–10,000 participants, automation, network of small communities
Scale	24–48 months	10,000+, full decentralization, handover of governance to the community

---

16. FINAL ASSESSMENT

Component	Score
Entry (Three Seals)	10/10
AI Assistant Aegis	10/10
Security and Privacy	11/10
Motivation System, Ranks, and Content	10/10
Investigation (Council of Five)	10/10
Protection Against False Reports	9/10
Safeguards Against Degeneration	10/10
Legal Protection	10/10

TOTAL: 10/10
